<h1 align="center">Ex.No. 11: PHP String Functions</h1>

Aim

To write a PHP program to implement at least five string functions with description.

Source Code

Ex11.html

```
<html>

<body bgcolor="tan">

<h1 align="center"><u>String Operations Demo</u></h1>

<form  id="myform" name="str" method="post" action="strfunc.php">

Enter a String<input type="text" name="str">

<input type="submit" value="Submit">

</form>

</body>

</html>
```

strfunc.php

```
<!DOCTYPE html>

<html>

<body bgcolor="purple" text="white">

<?php

echo "<h1><b>String operation</h1></b><br>";

$str = $_POST  ['str'];

echo  "Given String is $str<br>";

echo  "<br>Length of string given is "  .  +strlen($str);

echo  "<br> Reverse of string given is "  .  strrev($str);

echo  "<br> Position of string given is "  .  +strpos($str,"w");

echo  "<br> Word Count: "  .  +str_word_count($str);

echo  "<br> String Replacement: "  .  str_replace("world", "everyone", $str);

?>
```

</body>

</html>

<u>Result</u>

       Thus the PHP program to implement at least five string functions with description was written and executed successfully.
